

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

the making of Steel, yet according to the last and truest Process, the matter is plainly otherwise; for Iron this way made into Steel, becomes a kind of *Electrum*, and is filled with an exceeding brittle and hard Body of its own Nature; Iron being spongy and not close; for which purpose the refore, the Word *densare* is by *Pliny* aptly and elegantly used. And this way was used when the strongest temper and hardness was required; as to Picks and Anvils.

There might be divers reasons given for this last usage; as first, that there is far greater ease in working Iron, than Steel into any Figure, that being far softer and more ductible and loose.

Again, it is certain, and the Ancients in the passage last quoted do testify as much, that Iron by ignition is spoilt or corrupted, so that the oftner it is purged, tho' it were Steel it would the more relent. Whence knowing well, that in making their Tools out of Steel, they could not but considerably loose it and abate of their temper; they therefore first shaped them, and then gave them a strong Body of Steel and Temper together, and so had nothing else to do but to finish them on the Grindstone and Hone, to set the point or edge.

V. The Descriptions of certain Shells found in the East Indies, Communicated by Mr. Witzen to Dr. Lister, and by him to the Publisher, with some Remarks of his own.

S I R,

I Here sent you inclosed an Account of certain Shells and their Figures, which I received from Mr. *Witzen*, formerly Ambassadour here from the States of *Holland*, and

and also well known to the Learned World by his excellent Map of *Tartary*.

Translated from the *French*. He Writes thus :

‘ There are found on the Coasts of *Malabar* and *Ceylon*, certain Cockles or Shells in *Dutch* called *Keuk-borens*.
 ‘ These Shells contain a Fish that lives in the bottom of
 ‘ the Sea, fixt to the Body of the Shell, and at a certain
 ‘ Season of the Year, they cast their Seed which produces a sort of *Matrix* of the size of the Figure* ; this *Vid. Fig.*
 ‘ long Body which is wrinkled like an *Andouille* or *Sausage* 4.
 ‘ age is filled with a great number of round Celles, which
 ‘ are so many *Matrices*, each producing its little shell-fish ; which quit not their cells till they are grown to
 ‘ such a bigness and maturity, as their weight breaks them
 ‘ off and loosens them from their cells, and so from their
 ‘ common *Matrix*, which remains fastned to the bottom
 ‘ of the Sea by the great end, the other end moving about freely in the water, which is flexible every way
 ‘ like an *Andouille*. This *Matrix* the *Hollanders* call
 ‘ *Swambalk*.

‘ It is observable that this *Matrix* has a kind of back-part and Belly, the Back is something like that of a
 ‘ *Sckelvis* and of a greyish colour, the Belly is whiter,
 ‘ and is that part which is filled with the cells- from one
 ‘ end to the other : the Skin which covers it is very like
 ‘ that of Stock-fish or other dried Fish.

‘ *Figure the 5th*, Is a shell found in the River of *Goa*,
 ‘ which holds a sort of Oyster. It is very scarce and
 ‘ in the *Indies* as well as here the shell powdered is esteemed a good Medicine.

S I R,

THis last Figure is of an Oister-shell, the like is to be found in the *West indies*, whether the same species I cannot determine, having never seen them intire together to compare them. But Sir, considering the hint that is here given us, of its being thought Medicinal at *Goa* where it is found; and also how that calcined Shells are the most common entertainment all over the *Indies*, chiewing them all day long with the Leaves of a certain hot piperate and spicy Plant and a sort of Nut mixt therewith: we may reasonably suspect the *Goa* Stone to be made up of them, or such like Ingredients.

Tours, &c.

VI. A Paper of Mr. Flowers, containing some unknown Ancient Characters, with Remarks thereon by Francis Aston Esq; S. R. S.

THese Characters being Two and Twenty in Number, are all that could be distinctly Collected out of the Ancient Sculptures, to be found this day extant at the admired Hills of *Canary*; where there are divers receptacles cut out of the main Rock, by incredible Industry and Charge of the Ancient Inhabitants of those Parts supposed *Moors* or *Negroes* of *Ethiopia* rather than *Gentues*; by reason of the large proportion of their usual Statures, which is at least Eight Foot in height, having great Lips, full Eyes, flat Nose and curled Hair, and is worthy the Observation. So far Mr. *Flower* Feb. 3. 167 $\frac{2}{3}$.
